### Summary

The present invention is aimed to solve the problems mentioned above

The primary objective of this present invention is to maintain the integrity of the Chinese language. Words are not dismantled into strokes, nor spelled by alphabets. Each word is displayed and entered as a complete integral unit. The meanings of words and radicals are used as leads and indexes for organizing and searching words.

The main objective of this present invention is to create a typewriting method that does not require training. A person with minimum knowledge of computer and capable to read, to write Chinese language is able to typewrite Chinese words using this method offered by this invention, with complete accuracy at the virgin attempt. The pace of typing increases as the typing tasks progress.

The traditional way to search a word in a Chinese dictionary is following the orders of the orthodox radicals. It is often a very hectic process. Some words have multiple radicals, some words have hidden radicals, some words have implicit radicals and some words have conjectural ambiguous radicals. Some words have multiple meanings.

In a Chinese dictionary, a word appears only once as a principle of a dictionary, despite the extreme difficulty of finding it. A few attempts of trying different radicals is often needed before locating a word or even finding unsuccessfully. This orthodox radical word arrangement principle has restrained the broad use of the traditional Chinese dictionary.
